

The new goal: build your own AI and data platform, like Amazon. Chances are you’re already behind—only 13% of enterprises have successfully done so.

Nearly every enterprise (**95%**) wants to become its own AI and data platform—just like Amazon—within the next three years, regardless of geography.

Today, only 13% have successfully done so.

In Spain for instance, just **22%** are pursuing this now. In Singapore, **30%**.

But urgency is rising: **71%** of organizations in the U.S., Saudi Arabia, and the UAE plan to get there within a year.

Those already leading the way are seeing **5X the ROI** and producing **2X more agentic and generative AI** outcomes than their peers.

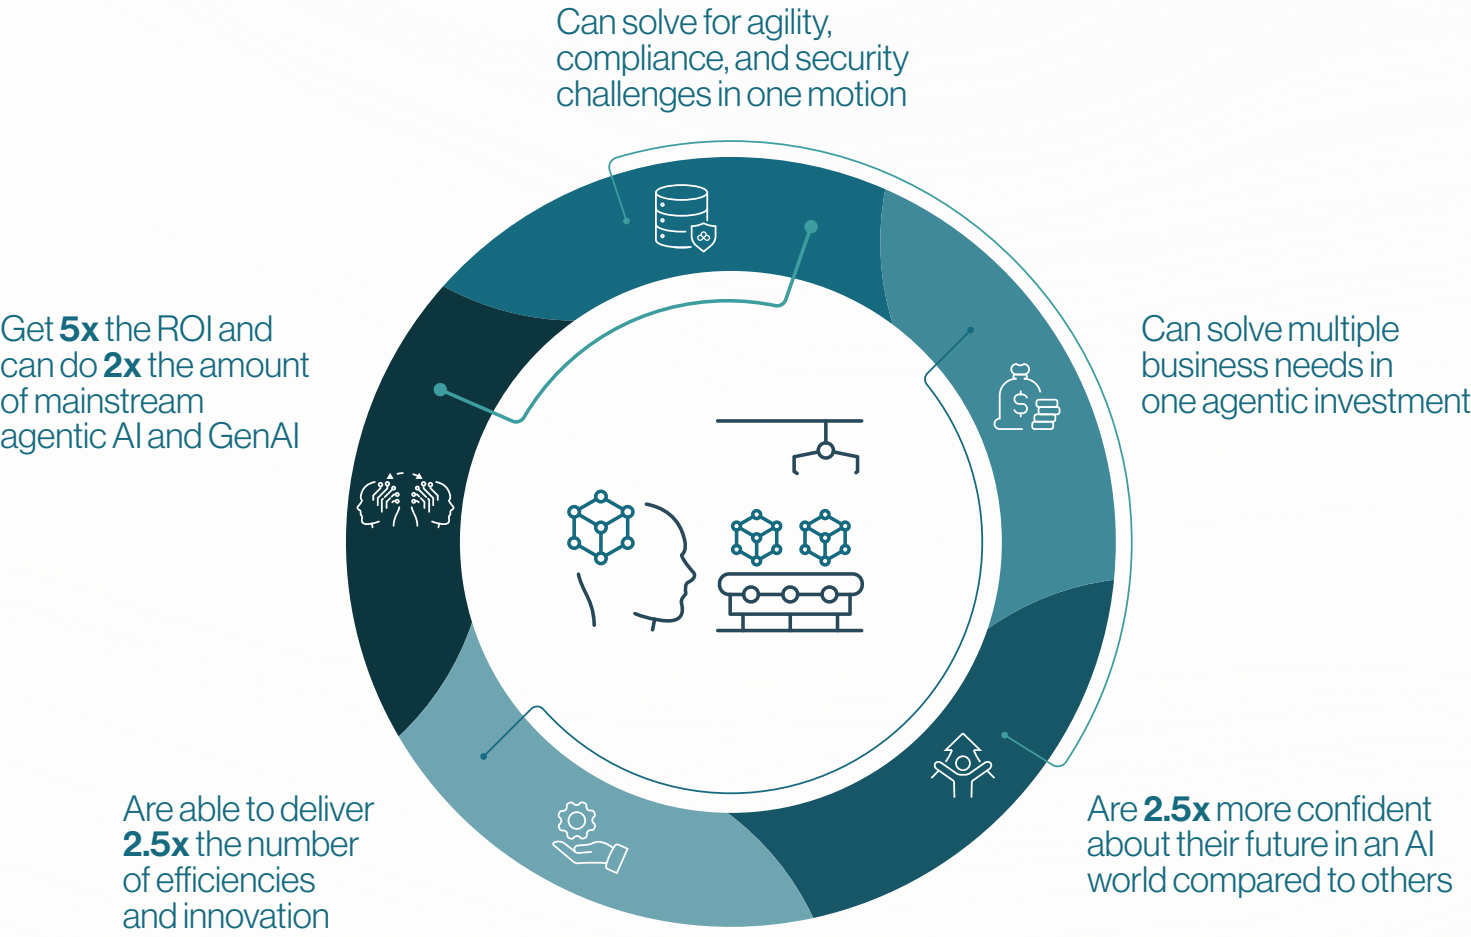

Where are you on this scale?

Your stance on sovereignty isn’t just a data point—it’s the pulse check for your whole organization.

There is a flywheel effect for those who take AI and data sovereignty as a mission-critical imperative
